Inspect the probe

- Inspect the shipping container for damage.
  Keep a damaged shipping container or cushioning material until the contents of
  the shipment have been checked for completeness and the probe has been
  checked mechanically and electrically.

- Check the accessories.
  Any accessories that were supplied with the probe are listed in "Available
  accessories" in this manual.
  - If the contents are incomplete or damaged, notify your Agilent Technologies
    Sales Office.

- Inspect the instrument.
  - If there is mechanical damage or defect, or if the probe does not operate
    properly or pass performance tests, notify your Agilent Technologies Sales
    Office.
  - If the shipping container is damaged, or the cushioning materials show signs
    of stress, notify the carrier as well as your Agilent Technologies Sales Office.
    Keep the shipping materials for the carrier’s inspection. The Agilent
    Technologies office will arrange for repair or replacement at Agilent
    Technologies’ option without waiting for claim settlement.
Agilent 10400B Series Miniature Passive Oscilloscope Probes

The Agilent 10400B Series Miniature Passive Oscilloscope Probes provide improved usability and performance of the Agilent 10400A Series Probes, and they offer a broader range of accessories. The Agilent 10400B Series Probes replace the Agilent 10400A Series, but maintain compatibility with them. To select the appropriate replacement probe, see the following table.

The Agilent Technologies B Series of miniature probes significantly reduces the problem of probing densely populated integrated circuit components and characteristically small conductors on printed circuit boards. These small, lightweight probes allow measurements that were previously very difficult, while reducing the hazard of shorting. The probe body fits in the hand as comfortably as a pencil.

Each probe includes a browser tip that will not slip off of the test point being probed and short to some adjacent point. The browser uses a crown point that “digs in” to solder, and will not slip.

These probes include a variety of ground leads for attaching to many different ground points. Probe packaging provides convenient storage and ordering information for replacement parts.

Other key features

- Narrow, sharp, replaceable probe tip.
- Browser attachment with ultra-sharp crown point. Use this to probe the circuit in debug mode. The crown point will not easily slip off of the lead you are probing. The pogo pin allows hand movement without losing contact.
- An assortment of long and short ground leads for connecting to a wide variety of points.
- Handle unscrews and pulls back to reduce the size of the probe.
- General-purpose retractable hook tip made of strong, durable music wire.
- Flexible, light-weight cable with kevlar strenghtener.
- Multi-position barrel insulator exposes as much or as little probe ground as desired at the probe tip.
- Probe comes in a convenient storage box, with labeled information on how to reorder parts.
- Automatic Probe Identification Pin (Agilent 10441B only).
Probe parts supplied

Parts supplied with the Agilent 10400B Series Probes are shown below.

You can order additional quantities of these parts. See the ordering information in this manual.
To order replaceable parts

To order a replaceable part, in the United States call our toll-free hotline at 1-877-447-7278, or call your local Agilent Technologies Sales Office.

The following table shows replacement parts that you can order directly from Agilent Technologies.

* Accessory kit includes 4 spring grounds, 4 browser pogo pins, 4 barrel insulators, and 1 screwdriver.

** Provides interface with the Agilent Wedges.
Agilent 10400B Series Miniature Passive Oscilloscope Probes

Probe parts supplied

Available accessories
- Agilent 10467-68701 SMD microclips for connection to SMT parts with lead spacings of 0.5 mm (0.020 inch) to 0.8 mm (0.032 inch).
- Agilent 5063-2143 probe tip-to-BNC adapter.
- Agilent 10100C BNC(m)-to-BNC(f) 50Ω feedthrough terminator.
- Agilent N2844A flexible tip jack adapter

- Agilent E9639A 5 mm socket adapter.

- Agilent N2767A (Qty 5) or Agilent N2768A (Qty 25) vertical mini-probe socket.
• Agilent N2765A (Qty 5) or Agilent N2766A (Qty 25) horizontal mini-probe socket.

Safety

- Meets IEC1010-2-31
- Pull strength (BNC to probe tip) ≤12 lb static pull
- Pollution degree 2
  - Normally only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation must be expected.

Voltage versus Frequency Rating Curve (except Agilent 10439B)

Voltage versus Frequency Rating Curve (Agilent 10439B)
Agilent 10400B Series Miniature Passive Oscilloscope Probes

Probe characteristics

The above curve only applies to 10 MΩ, 10:1 probes with the oscilloscope’s input impedance set to 1 MΩ.

The Agilent 10437B 50Ω probe is rated at 5 V_{RMS} maximum (CAT I).

The Agilent 10442B 500Ω probe is rated at 10 V_{RMS} (dc + ac_{RMS}) maximum (CAT I).

Indoor Use

This symbol indicates that the Agilent 10400B Series Probes are in compliance with European product regulations, including the EMC Directive and the Low Voltage Directive.

This symbol indicates that the Agilent 10400B Series Probes are in compliance with Australian product regulations.

CAT I and CAT II Definitions

Installation category (overvoltage category) I: Signal level, special equipment or parts of equipment, telecommunication, electronic etc., with smaller transient overvoltages than installation category (overvoltage category) II.

Installation category (overvoltage category) II: Local level, appliances, portable equipment etc., with smaller transient overvoltages than installation category (overvoltage category) III.
Bandwidth considerations

The dominant probe limitation to system bandwidth is its input capacitance, assuming that the high-frequency compensation adjustments have been made. The displayed bandwidth of any measurement system using an oscilloscope and probe is determined by four factors: probe input capacitance, source impedance, source bandwidth, and oscilloscope bandwidth.

The Agilent 10437B and Agilent 10442B probes are compatible with any oscilloscope that has a 50 Ω input.
Safety considerations

WARNING  SHOCK HAZARD!

These probes are designed for use with oscilloscopes that have a common terminal at GROUND POTENTIAL (in accordance with OSHA requirements and the National Electric Code). Exposed metallic surfaces of the probe and the oscilloscope MUST BE GROUNDED. Failure to ground the common terminal during certain applications, such as those requiring the oscilloscope to be powered from an external battery, might expose the operator to an electrical shock hazard that could be lethal (depending on voltage and current conditions.)

Cleaning the probe

If the Agilent 10400B Series Probe requires cleaning, disconnect it from all power sources and clean it with a soft cloth dampened with a mild soap and water solution. Make sure the probe is completely dry before reconnecting it to a power source.
To connect oscilloscope probes

1. Attach the probe connector to the desired oscilloscope channel.
2. Connect the probe to the circuit using any of the probing aids.
To operate the probe

When operating the Agilent 10400B Series Probes, these additional parts can help:

- **SMD Clip**
  The SMD clip lets you connect the Agilent 10400B Series Probe to SMT parts with dual lead adapter. See "Available accessories" described earlier for more information.

- **BNC-to-Probe Tip Adapter**
  This tip adapter lets you attach the probe to a BNC cable.

- **Spring Ground**
  The spring ground attaches to the probe to make ground contact with the circuit board, while letting you angle and maneuver the probe around an area.

**CAUTION**
Do not solder probe tip to any surface. Solder will damage the probe tip.

**CAUTION**
If you are using the probe without any accessories, the probe could cause a short if you drop it within the circuit.

1. **Attach the probe to the circuit.**
   You may use the probe tip pin without any accessories for probing in places that are difficult to reach.

   ![Probe Attachment Diagram]

   You may unscrew the cable strain relief from the probe and slide it back on the cable when using two or more probes in close proximity. When using the probe without the browser or retractable hook tip, you should use the barrel insulator (a supplied accessory) to cover the tip ground shield to prevent the hazard of shorting when you are probing the circuit. You may unscrew the barrel insulator and remove it to accommodate tight probing situations.
The barrel insulator can be screwed to multiple positions:
- With the barrel insulator screwed all the way on, you may add a spring ground (a supplied accessory) to the probe tip to provide ground contact.

2 With the barrel insulator screwed most of the way out, the barrel insulator covers the ground shield by the probe tip. 
**Ground the probe tip and barrel insulator.**
Ground the probe by attaching either the alligator ground, socket ground, or spring ground. Any of these ground accessories provides reference for a ground point.
To avoid possible shorting of other circuitry, use the barrel insulator in conjunction with any of the grounding accessories. For optimum performance, use the shortest ground lead.

3 **The browser.**
The browser tip has a crown point that digs into solder and will not slip. The spring-loaded pogo pin allows hand movement without losing contact.

4 **The retractable hook tip.**
Attach the hook tip to a probing point by pressing the retractable hook tip body towards the probe body. Place the hook tip around the probing point, then release the retractable hook tip body.
The retractable hook tip is used for most typical in-circuit probing and ICs.

**The Agilent Wedge Probe Adapter**
The Agilent Wedge Probe Adapter makes contact with legs of the IC under test when the Agilent Wedge Probe Adapter conductors are inserted into the space between the legs of the IC. If you are using the Agilent Wedge Adapter, refer to the supplied Agilent Wedge Adapter User's Guide.
To operate the probe

## Agilent Wedge Adapters

<table>

  (Agilent part number 1258-0141 for quantity of 1 jumper)
Compensation adjustments

You can adjust the probes for both low-frequency compensation and high-frequency compensation. Low-frequency compensation is an operating adjustment. You should perform high-frequency compensation periodically according to maintenance schedules.

<table>
<thead>
<tr>
<th>When to Adjust Probe Compensation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Low-frequency compensation is adjusted when the probe is first connected to the oscilloscope. Probe compensation will usually hold over all the attenuator ranges when used with a Agilent Technologies oscilloscope. If the input capacitance of the oscilloscope changes as ranges are switched, compensation must be adjusted each time a new range is selected.</td>
</tr>
</tbody>
</table>

Adjusting low-frequency compensation

Before you can have a flat frequency response when using a compensated passive divider probe, you must compensate the probe's cable capacitance and scope input capacitance to optimize the step response for flatness. You should compensate your probe to match its characteristics to the oscilloscope. A poorly compensated probe can introduce measurement errors.

1 Connect the probe from the appropriate oscilloscope channel to the front-panel probe adjust signal terminal [ ] on the scope. You can attach the probe with the hole in the probe body facing up to allow adjustment.

2 Press Autoscale.

3 Using the wide end of the supplied screwdriver tool, set the low-frequency compensation adjustment on the probe for the flattest pulse possible as shown below.

![Low-Frequency Adjustment and Waveforms](image_url)

Perfectly Compensated
Over Compensated
Under Compensated
Agilent 10400B Series Miniature Passive Oscilloscope Probes

Compensation adjustments

Adjusting high-frequency compensation

Do Low-Frequency Compensation First

You must do the low-frequency compensation procedure described previously before doing this high-frequency compensation procedure.

To compensate for cable loss in your probe, you'll need the equipment listed below.

<table>
<thead>
<tr>
<th>Equipment</th>
<th>Specification</th>
<th>Agilent Part Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>50 Ω feedthrough</td>
<td>50 Ω BNC(m) and (f)</td>
<td>10100C</td>
</tr>
<tr>
<td>Adapter</td>
<td>BNC-to-probe tip</td>
<td>5063-2143</td>
</tr>
</tbody>
</table>

1 Remove the probe cover to provide access to the two high-frequency compensation adjustment resistors.

2 Connect a 50 Ω feedthrough to the oscilloscope BNC ac cal out.
3 Connect the BNC-to-probe tip adapter to the 50 Ω feedthrough.
4 Remove any probing aid and the barrel insulator from the probe tip.
5 Connect the probe tip to the BNC-to-probe tip adapter.
6 Connect the probe BNC to the appropriate oscilloscope channel.
7 Press Autoscale, then set the time base to 5 ns/div.
8 Set the sample mode to equivalent time, and the # of averages to 4.
9 Rotate the two high-frequency compensation resistors fully clockwise.
10 Adjust the two high-frequency compensation resistors alternately in small increments until the displayed waveform has the flattest top.
Safety
This apparatus has been designed and tested in accordance with IEC Publication 1010, Safety Requirements for Measuring Apparatus, and has been supplied in a safe condition. To ensure safe operation and to keep the product safe, the information, cautions, and warnings in this operating manual must be heeded. In addition, note the external markings on the instrument that are described under "Safety Symbols."

Safety Symbols

⚠️ Instruction manual symbol: the product is marked with this symbol when it is necessary for you to refer to the instruction manual in order to protect against damage to the product.

⚡ Hazardous voltage symbol.

GROUND Earth terminal symbol: Used to indicate a circuit common connected to grounded chassis.

WARNING
The Warning sign denotes a hazard. It calls attention to a procedure, practice, or the like, which, if not correctly performed or adhered to, could result in personal injury. Do not proceed beyond a Warning sign until the indicated conditions are fully understood and met.

CAUTION
The Caution sign denotes a hazard. It calls attention to an operating procedure, practice, or the like, which, if not correctly performed or adhered to, could result in damage to or destruction of part or all of the product. Do not proceed beyond a Caution symbol until the indicated conditions are fully understood or met.

About this edition
This is the Agilent 10400B Series Miniature Passive Oscilloscope Probes User’s Guide.

Publication number
10433-92901, Nov. 1999
Printed in USA.

Print history is as follows:
10433-92901, Nov. 1999
10433-92900, Nov. 1998

New editions are complete revisions of the manual. Many product updates do not require manual changes; and, conversely, manual corrections may be done without accompanying product changes. Therefore, do not expect a one-to-one correspondence between product updates and manual updates.
