OPERATING AND SERVICE MANUAL

TRACKING GENERATOR
8444A
INCLUDES OPTION 058

SERIAL NUMBERS

This manual applies directly to instruments with serial numbers prefixed 1323A.

With modifications described in Section VII, this manual also applies to instruments with serial numbers prefixed 1033A, 1139A, 1147A, 1208A and 1215A.

For additional important information about serial numbers, see INSTRUMENTS COVERED BY MANUAL in Section I.

SECTION I
GENERAL INFORMATION

1-1. INTRODUCTION

1-2. This manual contains all information required to install, operate, test, adjust and service the Hewlett-Packard Model 8444A Tracking Generator. This section covers instrument identification, description, options, accessories, specifications and other basic information.

1-3. Figure 1-1 shows the Hewlett-Packard Model 8444A Tracking Generator with accessories supplied.

1-4. The various sections in this manual provide information as follows:

SECTION II, INSTALLATION, provides information relative to incoming inspection, power requirements, mounting, packing and shipping, etc.

SECTION III, OPERATION, provides information relative to operating the instrument.

SECTION IV, PERFORMANCE TESTS, provides information required to ascertain that the instrument is performing in accordance with published specifications.

SECTION V, ADJUSTMENTS, provides information required to properly adjust and align the instrument after repairs are made.

SECTION VI, REPLACEABLE PARTS, provides ordering information for all replaceable parts and assemblies.

SECTION VII, MANUAL CHANGES, normally will contain no relevant information in the original issue of a manual. This section is reserved to provide back-dated and up-dated information in manual revisions or reprints.

SECTION VIII, SERVICE, includes all information required to service the instrument.

1-5. SAFETY CONSIDERATIONS

1-6. General

1-7. This is an International Electrotechnical Commission Safety Class I instrument. This instrument has been designed and tested according to IEC Publication 348, “Safety Requirements for Electronic Measuring Apparatus,” and has been supplied in safe condition.

1-8. Operation

1-9. BEFORE APPLYING POWER, make sure the instrument’s ac input is set for the available ac line voltage, that the correct fuse is installed, and that all normal safety precautions have been taken.

1-10. Service

1-11. Although the instrument has been designed in accordance with international safety standards, the information, cautions, and warnings in this manual must be followed to ensure safe operation and to keep the instrument safe. Service and adjustments should be performed only by qualified service personnel.

1-12. Adjustment or repair of the opened instrument with the ac power connected should be avoided as much as possible and, when inevitable, should be performed only by a skilled person who knows the hazard involved.

1-13. Capacitors inside the instrument may still be charged even though the instrument has been disconnected from its source of supply.

1-14. Make sure only fuses of the required current rating and type (normal blow, time delay, etc.) are used for replacement. Do not use repaired fuses or short circuit the fuse holders.

1-15. Whenever it is likely that the protection has been impaired, make the instrument inoperative and secure it against any unintended operation.

WARNING:

If this instrument is to be energized through an autotransformer (for voltage reduction), make sure the common terminal is connected to the earthed pole of the power source.

BEFORE SWITCHING ON THE INSTRUMENT, the protective earth terminals of the instrument must be connected to the protective conductor of the mains power cord. The mains plug shall only be inserted in a socket outlet provided with
protective earth contact. The protection must not be negated by using an extension cord (power cable) without a protective grounding conductor.

Interruption of the protective (grounding) conductor, inside or outside the instrument, or disconnection of the protective earth terminal is likely to make this instrument dangerous. Intentional interruption of the earth ground is prohibited.

Servicing this instrument often requires that you work with the instrument's protective covers removed and with ac power connected. Be very careful; the energy at many points in the instrument may, if contacted, cause personal injury.

With the ac power cable connected, the ac line voltage is present at the terminals of the power line module and at the LINE power switch. Be very careful. Bodily contact with this voltage can be fatal.

**CAUTIONS**

**BEFORE SWITCHING ON THIS INSTRUMENT,** make sure instrument's ac input is set to the voltage of the ac power source.

**BEFORE SWITCHING ON THIS INSTRUMENT,** make sure that all devices connected to the instrument are connected to the protective earth ground.

**BEFORE SWITCHING ON THIS INSTRUMENT,** make sure the line power (mains) plug is connected to a three-conductor line power outlet that has a protective (earth) ground. (Grounding one conductor of a two-conductor outlet is not sufficient.)

**BEFORE SWITCHING ON THIS INSTRUMENT,** make sure the ac line fuse is of the required current rating and type (normal-blow, time-delay, etc.).

1-16. **INSTRUMENTS COVERED BY MANUAL**

1-17. Hewlett-Packard instruments carry a serial number (see Figure 1-2) on the back panel. When the serial number prefix on the instrument serial number plate of your instrument is the same as one of the prefix numbers on the inside title page of this manual, the manual applies directly to the instrument. When the instrument serial number prefix is not listed on the inside title page of initial issue, manual change sheets and manual updating information is provided. Later editions or revisions to the manual will contain the required change information in Section VII.

![Figure 1-2. Instrument Identification](image)

1-18. **DESCRIPTION**

1-19. The Model 8444A Tracking Generator is designed to complement both Model 8554B and Model 8555A Spectrum Analyzer RF Sections. The Tracking Generator covers the frequency range of 500 kHz to 1250 MHz when used with the 8554B RF Section and from 10 MHz to 1.3 GHz when used with the 8555A RF Section. The Tracking Generator/Spectrum Analyzer functions as a system to perform frequency response measurements. Additionally, the system can be used as a signal generator or sweeper to supply a test signal to other devices. An auxiliary output is provided for precision frequency measurements by an external frequency counter.

1-20. The Tracking Generator converts the first and third local oscillator (LO) signals from the Spectrum Analyzer RF Section, to a signal that tracks the frequency tuning of the RF Section. With the Spectrum Analyzer operating in ZERO SCAN WIDTH, the Tracking Generator is a CW signal generator, tuned to the frequency of the analyzer. In FULL or PER DIVISION SCAN WIDTH the Tracking Generator functions as a sweep oscillator which tracks the analyzer tuning. Additionally, a
Table 1-1. System Specifications

These system specifications describe the performance available from the spectrum analyzer-tracking generator system in various types of applications. In all cases it is assumed that the spectrum analyzer is equipped with either an 8554B or 8555A Tuning Section, 8552A or 8552B IF Section, 140T or 141T Display Section.

</table>

**SPECTRAL PURITY**

- Residual FM (peak-to-peak):
  - Tuning Section Stabilized Unstabilized
  - 8554B/8555A 200 Hz 10 kHz
- Harmonic Distortion: Typically 75 dB below output level.
- Nonharmonic (spurious) Signals: > 35 dB below output level.
- Flatness: ± 0.5 dB.

**LONG TERM STABILITY**

Drift typically less than 30 kHz/hour when stabilized after 2-hour warmup.

**Sweep Width**

20 kHz to 1250 MHz (8554B) or 1300 MHz (8555A).

**Sweep Rates**

Selected by Scan Time per Division on spectrum analyzer. 16 internal scan rates from 1 to 10 sec/div in a 1, 2, 5 sequence. Manual Scan is available with the external sweep voltage from the 8444A or by a front panel control of the 8552B IF Section.

**PRECISION FREQUENCY MEASUREMENTS**

An external counter output is provided on the 8444A for precision frequency measurements. The frequency of unknown signals as well as the frequency of any point on a frequency response curve can be measured. The use of the HP 5300A/5303A Counter is suggested for frequency measurements to 500 MHz and the HP 5245L/5354C Counter for measurements to 1500 MHz.

**Frequency Accuracy:**

For unknown signals ±10 kHz. (Tracking drift typically 5 kHz/10 min after 2-hour warmup.) For points on frequency response curve, counter accuracy ± Residual FM.

**Counter Mode of Operation:**

- Manual Scan: Scan determined either by front panel control of 8552B IF Section or by external scan signal provided by the 8444A.
- Zero Scan: Analyzer is fixed tuned receiver. Counter reads center frequency to accuracy of tracking drift.
- Counter Output Level: 0.1 V rms.

**GENERAL SPECIFICATIONS**

**Temperature Range:** Operation, 0 to 55°C, storage –40°C to 75°C

**Power:** 115V and 230V, 48 to 440 Hz, 12 watts max.
MANUAL SCAN control on the Tracking Generator allows manual tuning of the Spectrum Analyzer/Tracking Generator System. The amplitude of the Tracking Generator output is adjustable over a 0 to \(-10\) dBm range by a front panel vernier control. The output level is calibrated at 30 MHz to \(0 \pm 0.5\) dBm and maintained by an automatic level control circuit. Refer to Table 1-1 for system performance specifications.

1-21 8554L RF SECTION MODIFICATIONS

1-22. Hewlett-Packard Model 8554L Spectrum Analyzer RF Section with serial prefixes 1101A and below require modification for Tracking Generator compatibility. The modification consists of adding two cables to the RF Section. The cables provide front panel access to the first and third LO outputs. The modification kit, HP Part Number 08554-60056, containing all necessary parts and information is available from any Hewlett-Packard Sales and Service Office. (A list of Sales and Service offices is contained in the back of this manual.) Service Note 8554L-6 containing the modification procedure is included with the modification kit. After modification, the Service Note should be filed with the 8554L Service Manual.

1-23. ACCESSORIES SUPPLIED

1-24. Accessories supplied with the Tracking Generator are listed in Table 1-2. RF cables, supplied with the Tracking Generator, allow operation with either the 8554B or 8555A Spectrum Analyzer RF Sections. The power cable, supplied with the instrument, is selected at time of shipment. Cable selection is based on shipping destination. Figure 2-1 illustrates the different power cable connectors that are currently available.

1-25. EQUIPMENT REQUIRED BUT NOT SUPPLIED

1-26. In addition to the accessories supplied with the Tracking Generator, a Spectrum Analyzer System is required to complete the Tracking Generator Spectrum Analyzer System. The Tracking Generator is compatible with either the 8554B/8552( )/140-series Spectrum Analyzer System or the 8555A/8552( )/140-series Spectrum Analyzer System. Refer to paragraph 1-11 for modifications to early model Spectrum Analyzer Systems. For precision frequency measurements a frequency counter is required for use with the Tracking Generator/Spectrum Analyzer System. Operating accessories are listed in Table 1-4.

1-27. WARRANTY

1-28. The Hewlett-Packard Model 8444A Tracking Generator is warranted and certified as indicated on the inner front cover of this manual. For further information contact the nearest Hewlett-Packard Sales and Service office; addresses are provided at the back of this manual.

1-29. RECOMMENDED TEST EQUIPMENT

1-30. Table 1-3 lists the test equipment and accessories required to check, adjust, and repair the Tracking Generator. If substitute equipment is used, it must meet the Minimum Specifications listed in Table 1-3.

</table>
2-1. INITIAL INSPECTION

2-2. Mechanical Check

2-3. Check the shipping carton for evidence of damage immediately after receipt. If there is any visible damage to the carton, request the carrier’s agent be present when the instrument is unpacked. Inspect the instrument for physical damage such as bent or broken parts and dents or scratches. If damage is found refer to paragraph 2-6 for recommended claim procedures. If the instrument appears to be undamaged, perform the electrical check (see paragraph 2-4). The packaging material should be retained for possible future use.

2-4. Electrical Check

2-5. The electrical check consists of following the performance test procedures listed in Section IV. These procedures allow the operator to determine that the instrument is, or is not, operating within the specifications listed in Table 1-1. The initial performance and accuracy of the instrument are certified as stated on the inside front cover of this manual. If the instrument does not operate as specified, refer to paragraph 2-6 for the recommended claim procedure.

2-6. CLAIMS FOR DAMAGE

2-7. If physical damage is found when the instrument is unpacked, notify the carrier and the nearest Hewlett-Packard Sales and Service office immediately. The Sales and Service office will arrange for repair or replacement without waiting for a claim to be settled with the carrier.

2-8. The warranty statement for the instrument is on the inside front cover of this manual. Contact the nearest Sales and Service office for information about warranty claims.

2-9. PREPARATION FOR USE

CAUTION

Before applying power, check the power selector switch on the Tracking Generator input power module (rear panel) for proper position (115 or 230 volts).

2-10. Power Requirements

2-11. The Tracking Generator can be operated from a 48- to 440-hertz input line that supplies either 115- or 230-volt (+10% in each case) power. Consumed power is normally less than 15 watts.

2-12. The 115/230 power selector switch on the rear panel line power module must be set to agree with the available line voltage. The selector switch is located below the fuse holder and fuse extractor lever. An arrow on the selector switch points to callouts listing the line input voltage and fuse amperage rating. To change the position of the selector switch it is necessary to remove the power cable, slide the protective cover to the left and lift the fuse extractor before the switch can be changed. With the fuse extractor extended, press down and toward the desired direction. Replace fuse with a fuse of the amperage rating for the selected position. See Section VI for replacement HP Part Numbers. The instrument is normally shipped with fuse installed for 115-volt operation.

2-13. Power Cable

2-14. To protect operating personnel, the National Electrical Manufacturers Association (NEMA) and the International Electrotechnical Commission (IEC) recommends that the instrument panel and cabinet be grounded. The Tracking Generator is equipped with a three-conductor power cable; the third conductor is the ground conductor and when the cable is plugged into an appropriate receptacle, the instrument is grounded. To preserve the protection feature when operating the instrument from a two-contact outlet, use a three-prong to two-prong adapter and connect the green or green/yellow lead on the adapter to ground.

2-15. Power cables are selected for shipment with each instrument; with a line connector plug to match the standard power cord for the country of destination on the purchase order. A label indicating the power cable inside is affixed to the packing case. Figure 2-1 indicates the connector plugs and the HP part numbers for the various available power cables and plugs.

2-16. OPERATING ENVIRONMENT

2-17. The Tracking Generator does not require forced air cooling when operating at temperatures from 0 to 55°C (32 to 131°F). When operating the instrument, choose a location which will provide at
least three inches of clearance around the rear and both sides. Normal air circulation will maintain a reasonable temperature within the instrument.

2-18. INSTALLATION CONNECTIONS

2-19. A rack mounting kit is supplied for rack installation. Additionally, a joining bracket kit (accessory) can be provided to secure the Tracking Generator to the Spectrum Analyzer. Installation instructions are supplied with both joining bracket and rack mounting kits.

2-20. Electrical connections are provided by three coaxial cables and two line power cords. Coaxial cables connect Spectrum Analyzer FIRST LO OUTPUT to Tracking Generator FIRST LO INPUT, THIRD LO OUTPUT to THIRD LO INPUT and SCAN OUTPUT to SCAN IN/OUT. Double shielded coaxial cables are provided for connection between local oscillator input and output connectors. Refer to Table 1-2 for description and HP part number of cables supplied with the Tracking Generator.

2-21. STORAGE AND SHIPMENT

2-22. Original Packaging

2-23. The same containers and materials used in factory packaging can be obtained through the Hewlett-Packard Sales and Service offices listed at the rear of this manual.

2-24. If the instrument is being returned to Hewlett-Packard for servicing, attach a tag indicating service required, return address, instrument model number and full serial number. Mark the container FRAGILE to assure careful handling.

2-25. In any correspondence refer to the instrument by model number and full serial number.

2-26. Other Packaging Materials

2-27. The following general instructions should be followed when repackaging with commercially available materials:

a. Wrap the instrument in heavy paper or plastic. (If shipping to a Hewlett-Packard Service office or center attach a tag indicating the type of service required, return address, model number and full serial number.)

b. Use a strong shipping container. A double-wall carton made of 350 pound test material is adequate.

c. Use enough shock-absorbing material (three to four inch layer) around all sides of the instrument to provide firm cushion and prevent movement inside the container. Protect the control panel with cardboard.

d. Seal the shipping container securely.

e. Mark the shipping container FRAGILE to assure careful handling.

2-2
SECTION III
OPERATION

3-1. INTRODUCTION

3-2. This section provides complete operation instructions for the HP Model 8444A Tracking Generator. Front and rear panel controls, connectors and indicators for the Tracking Generator are identified and described in Figures 3-1 and 3-2. Operational connections and adjustments for the Tracking Generator and an 8554B Spectrum Analyzer System are detailed in Figure 3-3. Operational connections and adjustments for the Tracking Generator and an 8555A Spectrum Analyzer System are detailed in Figure 3-4. Additional operating information is contained in Figures 3-5 through 3-10.

3-3. PANEL FEATURES

3-4. Front and rear panel features of the Tracking Generator are described in Figures 3-1 and 3-2. Front and rear panel views of the Tracking Generator connected to the HP 8554B/8552/141T Spectrum Analyzer are shown in Figure 3-3. Front and rear panel views of the Tracking Generator connected to the HP 8555A/8552/141T Spectrum Analyzer are shown in Figure 3-4. For a detailed description of the Spectrum Analyzer controls, connectors and indicators refer to the appropriate operating and service manuals for those instruments. Interconnection wiring between the Tracking Generator and the Spectrum Analyzer is contained in Section VIII (Service Sheet 1) of this manual.

3-5. OPERATOR’S CHECKS

3-6. Upon receipt of the instrument, or when the Tracking Generator is to be used with a different Spectrum Analyzer, perform the operational adjustment procedures listed in Figure 3-3 or 3-4.

3-7. OPERATING INSTRUCTIONS

3-8. General operating instructions are contained in Figures 3-3 and 3-4. These instructions will familiarize the operator with basic operating functions of the Tracking Generator in use with Spectrum Analyzers. Additional operating techniques and information is contained in Figures 3-5 through 3-10.

3-9. CONTROLS, INDICATORS AND CONNECTORS

3-10. Front and rear panel controls, indicators and connectors are identified and briefly described in Figures 3-1 and 3-2. Operational adjustment procedures are given in Figures 3-3 and 3-4. Additional information, to assist the user during instrument operation, is given in the following paragraphs.

3-11. OPERATING TECHNIQUES

3-12. The following information is provided to acquaint the user with Tracking Generator/Spectrum Analyzer operation. When a device is placed in the signal path between the Tracking Generator and the Spectrum Analyzer, the analyzer detects and displays the frequency response of the device under test. The Spectrum Analyzer tuning and scan width settings determine the Tracking Generator output frequency and the resultant CRT display. The type of device, control settings, and typical display is provided for each of the following measurements.

c. Low-Pass Filter Measurement, Para. 3-17.
e. Amplifier Gain and Bandwidth Measurement, Para. 3-21.
f. Precision Frequency Measurement, Para. 3-23.
FRONT PANEL

1. **LINE — ON/OFF.** Controls primary power to Tracking Generator. Light glows when switch is energized. Type A1H bulb. For access to bulb, switch to OFF and pull button straight out.

2. **MANUAL SCAN.** Provides manual tuning of Spectrum Analyzer. Controls voltage level at SCAN OUTPUT (8) below. Scan trace on CRT determined by position of MANUAL SCAN control. For MANUAL SCAN operation, connect cable between Tracking Generator SCAN OUTPUT and Spectrum Analyzer SCAN IN/OUT. Set Spectrum Analyzer SCAN MODE switch to EXT. Vary MANUAL SCAN control to tune analyzer through selected SCAN WIDTH.

3. **TRACK ADJ.** Adjusts frequency of 1.55 GHz oscillator in Tracking Generator so that the RF OUTPUT (5) tracks the frequency tuning of the Spectrum Analyzer. Control adjusted for maximum amplitude indication of trace on CRT display. Ten-turn control provides adjustment of frequency over a range of approximately 4 MHz.

4. **LEVEL.** Adjusts Tracking Generator RF OUTPUT (5) level over range of 0 to −10 dBm. Level calibrated for 0 dBm at 30 MHz with accuracy of ±0.5 dB. Set LEVEL control to 0 dBm for calibrated CRT display on Spectrum Analyzer.

5. **RF OUTPUT.** Type N Connector — Tracking Generator RF output connector. Frequency adjusted to track tuning of Spectrum Analyzer by TRACK ADJ (3). Output level adjusted by LEVEL (4).

6. **THIRD LO INPUT.** Type BNC connector — Input for Spectrum Analyzer third LO (500 MHz). Normally used with 8554B RF Section. Parallel with rear panel THIRD LO INPUT which is normally used with 8555A RF Section.

7. **FIRST LO INPUT.** Type BNC connector — Input for Spectrum Analyzer first LO (2.05 — 3.3 GHz with 8554L RF Section) — (2.05 — 4.1 GHz with 8555A RF Section).

8. **SCAN OUTPUT.** Type BNC connector. Manual tune voltage to Spectrum Analyzer (0 to 10 Vdc). Voltage level controlled by position of MANUAL SCAN (2).

Figure 3-1. Model 8444A Tracking Generator Front Panel Controls, Indicators and Connectors
**REAR PANEL**

1. **AUX RF OUTPUT.** Type BNC connector — Tracking Generator auxiliary RF output. Same frequency as signal out front panel RF OUTPUT connector. For use with external frequency counter during precision frequency measurements. Terminate in 50 ohms.

2. **THIRD LO INPUT.** Type BNC connector — Input for Spectrum Analyzer third LO (500 MHz). Normally used with 8555A RF Section. Parallel with front panel THIRD LO INPUT which is normally used with 8554B RF Section.

3. **ACCESSORY OUTLET.** Line power outlet. Connected to power line module input. Provides ac outlet for use by accessory equipment.

4. **Line power module. 115/230V, 48–440 Hz.**

5. **Line input.** Connects to external ac power source. Supplies ac power to ACCESSORY OUTLET when connected to external power source.

6. **115/230V Switch.** Line voltage slide switch; controls power supply input connections. Check that switch is set for nominal voltage of ac line. To change setting: remove power cord from line input (5), slide protective cover aside, extract fuse with FUSE PULL (7) and slide switch to desired position. Replace fuse with a fuse of the value indicated for the desired switch position.

7. **Fuse extractor and switch lock.** Prevents line switch from being actuated until fuse is extracted.

8. **Line input fuse.** Rating of fuse to be used is marked near line voltage slide switch setting corresponding to nominal ac supply voltage.

---

Note

See Table 1-4 for HP part numbers of interconnecting power cords.

---

*Figure 3-2. Model 8444A Tracking Generator Rear Panel Controls and Connectors*
Figure 3-3. Tracking Generator Operation with 8554B Spectrum Analyzer (1 of 2)
1. Check that the 115/230V switch is set to correspond with the available line voltage. Refer to Figure 3-2, steps 4 through 8, for switch and fuse information.

2. Apply power to Tracking Generator and Spectrum Analyzer.

3. Turn Spectrum Analyzer INTENSITY control fully CCW.

4. Allow instruments to warm up for at least 30 minutes.

6. Set Spectrum Analyzer LOG/LINEAR control to LOG, LOG REF LEVEL to 0 dBm, and BANDWIDTH to 300 kHz.

7. Make the following interconnections between Tracking Generator and Spectrum Analyzer:
   a. FIRST LO INPUT to FIRST LO OUTPUT.
   b. THIRD LO INPUT to THIRD LO OUTPUT.
   c. RF OUTPUT to RF INPUT.
   d. SCAN OUTPUT to SCAN IN/OUT.

8. Check that the Spectrum Analyzer controls are set as follows:

   INTENSITY .................. 12 o'clock (approx.)
   FREQUENCY .................... 30 MHz
   BANDWIDTH .................... 300 kHz
   SCAN WIDTH PER DIVISION ...... 50 kHz
   INPUT ATTENUATION ............ 10 dB
   TUNING STABILIZER ............. On CCW
   BASE LINE CLIPPER ............ 5 MILLISECONDS
   LOG/LINEAR .................... LOG
   LOG REF LEVEL .................. 0 dBm
   LOG REF LEVEL Vernier .......... OFF
   VIDEO FILTER .................. INT
   SCAN MODE ..................... LINE

9. Set Tracking Generator LEVEL control to 0 dBm and adjust TRACK ADJ for maximum signal amplitude indication on CRT display.

10. Adjust Spectrum Analyzer Vernier control or Tracking Generator LEVEL control to position signal on CRT LOG REF level graticule line. (System calibrated at 30 MHz with an amplitude accuracy of ±0.5 dB.)

11. Set Spectrum Analyzer to scan desired frequency range. (FREQUENCY control adjusted to center of frequency of interest, SCAN WIDTH set for desired coverage.)

12. Insert device to be tested between Tracking Generator RF OUTPUT and Spectrum Analyzer RF INPUT.

13. Rotate Tracking Generator MANUAL SCAN control fully counterclockwise.

14. Set Spectrum Analyzer SCAN MODE switch to EXT.

15. Rotate Tracking Generator MANUAL SCAN control clockwise to tune system through selected frequency range.

16. For automatic scanning, set SCAN MODE switch to INT and SCAN TIME PER DIVISION to desired scan time.

---

Figure 3-3. Tracking Generator Operation with 8554B Spectrum Analyzer (2 of 2)
OPERATING PROCEDURE
WITH AN 8555A

1. Check that the 115/230 switch is set to correspond with the available line voltage. Refer to Figure 3-2, steps 4 through 8, for switch and fuse information.

2. Apply power to Tracking Generator and Spectrum Analyzer.

3. Turn Spectrum Analyzer INTENSITY control fully CCW.

4. Allow instruments to warm up for at least 30 minutes.

5. Perform Spectrum Analyzer Operational Adjustments (30 MHz Calibration). Refer to 8555A RF Section Operating and Service Manual.

6. Set Spectrum Analyzer LOG/LINEAR control to LOG, LOG REF LEVEL to 0 dBm, and BANDWIDTH to 300 kHz.

7. Make the following interconnections between Tracking Generator and Spectrum Analyzer:
   a. FIRST LO INPUT to FIRST LO OUTPUT.
   b. THIRD LO INPUT to THIRD LO OUTPUT (rear panel connections).
   c. RF OUTPUT to INPUT.
   d. SCAN OUTPUT to SCAN IN/OUT.

8. Check that the Spectrum Analyzer controls are set as follows:
   INTENSITY ..................... 12 o'clock (approx.)
   BAND .............................. n=1—(2.05 GHz IF)
   FREQUENCY ........................ 30 MHz
   BANDWIDTH ........................ 300 kHz
   SCAN WIDTH PER DIVISION ...... 100 kHz
   INPUT ATTENUATION ............... 20 dB
   TUNING STABILIZER ............... ON
   SIGNAL IDENTIFIER ............... OFF
   BASE LINE CLIPPER ............... CCW
   SCAN TIME PER DIVISION ........... 10 MILLISECONDS

   LOG/LINEAR ........................ LOG
   LOG REF LEVEL ........................ 0 dBm
   LOG REF LEVEL Vernier ............... 0
   VIDEO FILTER ........................ OFF
   SCAN MODE ............................. INT
   SCAN TRIGGER .......................... LINE or AUTO

9. Set Tracking Generator LEVEL control to 0 dBm and adjust TRACK ADJ for maximum signal amplitude indication on CRT display.

10. Adjust Spectrum Analyzer Vernier control or Tracking Generator LEVEL control to position signal on CRT LOG REF level graticule line. (System calibrated at 30 MHz with an amplitude accuracy of ±0.5 dB.)

11. Set Spectrum Analyzer to scan desired frequency range. (FREQUENCY control adjusted to center of frequency of interest, SCAN WIDTH set for desired coverage.)

12. Insert device to be tested between Tracking Generator RF OUTPUT and Spectrum Analyzer RF INPUT.

13. Rotate Tracking Generator MANUAL SCAN control fully counterclockwise.

14. Set Spectrum Analyzer SCAN MODE switch to EXT.

15. Rotate Tracking Generator MANUAL SCAN control clockwise to tune system through selected frequency range.

16. For automatic scanning, set SCAN MODE switch to INT and SCAN TIME PER DIVISION to desired scan time.

Figure 3-4. Tracking Generator Operation with 8555A Spectrum Analyzer (2 of 2)
3-13. Crystal Filter Measurement

3-14. Figure 3-5 illustrates the CRT display for a 20 MHz crystal filter. Filter characteristics: 2-kHz passband with bandwidth at the 60-dB points less than 10 kHz.

a. Spectrum Analyzer (8555A) control settings:

FREQUENCY ....................... 20 MHz
BANDWIDTH ...................... 3 kHz
SCAN WIDTH PER DIVISION .... 5 kHz
INPUT ATTENUATION ............ 10 dB
SCAN TIME PER DIVISION ...... 20 MILLISECONDS
LOG REF LEVEL ................ 0 dBm
VIDEO FILTER .................. 100 Hz
SCAN MODE ..................... INT
SCAN TRIGGER .................. AUTO
LOG/LINEAR .................... LOG

b. Tracking Generator control settings:

TRACK ADJ ..................... Peak
LEVEL ......................... 0 dBm

Figure 3-5. 20 MHz Crystal Filter CRT Display

3-15. Bandpass Filter Measurement

3-16. Figure 3-6 illustrates the CRT display for a 50 MHz bandpass filter. Filter characteristics: 50 MHz, 4-pole bandpass filter; adjusted for bandwidth of approximately 5 MHz at the 3 dB points. Bandwidth at 60 dB points is approximately 32 MHz.

a. Spectrum Analyzer (8555A) control settings:

FREQUENCY ..................... 50 MHz
BANDWIDTH .................... 10 kHz
SCAN WIDTH PER DIVISION ... 5 MHz
INPUT ATTENUATION ............ 10 dB

3-17. Low-Pass Filter Measurement

3-18. Figure 3-7 illustrates the CRT display for a 23 MHz low-pass filter. Filter characteristics: 3 dB point at approximately 23 MHz, 60 dB point at approximately 42 MHz.

a. Spectrum Analyzer (8555A) control settings:

FREQUENCY ..................... 25 MHz
SCAN WIDTH PER DIVISION .... 5 MHz
BANDWIDTH .................... 100 kHz
INPUT ATTENUATION ............ 10 dB
SCAN TIME PER DIVISION ...... 0.1 SECONDS
LOG/LINEAR .................... LOG
LOG REF LEVEL ................ (±) 10 dBm
LOG REF LEVEL Vernier ........ -3 dB
VIDEO FILTER .................. 10 Hz
SCAN MODE ..................... INT
SCAN TRIGGER .................. AUTO

b. Tracking Generator control settings:

TRACK ADJ ..................... Peak
LEVEL ......................... 0 dBm

Figure 3-6. 50 MHz Bandpass Filter CRT Display
3-19. Swept Return Loss Measurement

3-20. Figure 3-8 illustrates the CRT display for a swept return loss or reflection coefficient measurement. A directional bridge (HP 8721A) was used to separate the incident from the reflected signal. The filter under test is the same 23-MHz Low-Pass (paragraph 3-18). Control settings same as paragraph 3-18 except analyzer gain adjusted so that the top graticule line represents 0 dB return loss or total reflection (e.g. a short or open circuit). Return loss is greater than 15 dB (a 0.18, SWR 1.44) over the filter range of 0 to 23 MHz.

3-21. Amplifier Gain and Bandwidth Measurement

3-22. Figure 3-9 illustrates the CRT display for a .1 to 400 MHz amplifier with gain of approximately 19 dB. A reference level is first established by connecting the Tracking Generator output to the Spectrum Analyzer (through a 30 dB attenuator) and scanning over the range of interest. The amplifier is then connected between the Tracking Generator and the Spectrum Analyzer and the same frequency range scanned. The Spectrum Analyzer (8554B) set to full scan (0–1250) provides a CRT display indication as follows: 3-dB bandwidth approximately 500 MHz (level at +1 graticule line) and zero gain point of approximately 1025 MHz.

   a. 30 dB Coaxial Attenuator installed at Tracking Generator RF OUTPUT.

   b. Spectrum Analyzer (8554B) control settings:

   BANDWIDTH ....................... 300 kHz
   SCAN WIDTH ....................... 0–1250 MHz
   INPUT ATTENUATION .............. 10 dB
   SCAN TIME PER DIVISION 10 MILISECONDS
   LOG/LINEAR ...................... LOG
   LOG REF LEVEL ................... +10 dBm
   VIDEO FILTER .................... OFF
   SCAN MODE ....................... INT
   SCAN TRIGGER .................... AUTO

   c. Tracking Generator control settings:

   TRACK ADJ .......................... Peak
   LEVEL ............................ 0 dBm

3-23. Precision Frequency Measurements

3-24. An external frequency counter may be used with the Tracking Generator/Spectrum Analyzer System for frequency measurements at any point on the CRT display. With the counter connected to the Tracking Generator AUX RF OUTPUT jack (rear panel) and the system operated in the MANUAL SCAN mode; the scan can be stopped at any point for frequency measurement.

**CAUTION**

Do not leave System stopped in MANUAL SCAN with high INTENSITY. Damage to the display CRT can result.
Figure 3-10 illustrates frequency measurement at the 30 dB point on a low-pass filter.

a. Spectrum Analyzer (8554B) control settings:

FREQUENCY .................. 50 MHz
BANDWIDTH .................. 300 kHz
SCAN WIDTH PER DIVISION .... 10 MHz
INPUT ATTENUATION .......... 10 dB
SCAN TIME PER DIVISION 10 MILLISECONDS
LOG REF LEVEL ................ 0 dBm
LOG/LINEAR .................. LOG
VIDEO FILTER ........................ OFF
SCAN MODE .......................... INT
SCAN TRIGGER ....................... AUTO

b. Tracking Generator control settings:

TRACK ADJ .......................... Peak
LEVEL .......................... 0 dBm
MANUAL SCAN .................. CCW

c. Connect unit under test between Tracking Generator RF OUTPUT and Spectrum Analyzer RF INPUT.

d. Connect Tracking Generator AUX RF OUTPUT to Frequency Counter input.

e. Connect Tracking Generator SCAN OUTPUT to Spectrum Analyzer SCAN IN/OUT.

f. Connect Tracking Generator FIRST LO INPUT to Spectrum Analyzer FIRST LO OUTPUT and THIRD LO INPUT to THIRD LO OUTPUT.

g. Note point of interest on CRT display.

h. Set Spectrum Analyzer SCAN MODE to EXT and rotate Tracking Generator MANUAL SCAN control clockwise to point of interest.

i. Note and record frequency.

j. Set Spectrum Analyzer SCAN MODE to INT.

Note

The CRT trace (dot) can be moved in either direction by the Tracking Generator MANUAL SCAN control. For best frequency accuracy, approach frequency measurement point while tuning the MANUAL SCAN control in the clockwise direction.
